The Ministry of Finance and Public Administrations participates at SIMO Network 2012

- Some 90% of procedures and services and 99% of the General State Administration's processes are accessible electronically to citizens and companies

26 September 2012. The Ministry of Finance and Public Administrations, through the Directorate General for Administrative Modernisation, Procedures and Promotion of Electronic Administration, is participating in the technology-business fair SIMO Network 2012, which starts today in Madrid, with a stand in Hall 5 of IFEMA, in which citizens can learn about the electronic services offered by the State General Administration.

The stand, which features the Ministry and e-Government logos, has computer terminals that simulate electronic services available on the website created for the publicity campaign: www.masdestacados.060.es.

At present more than 90% of procedures and services and 99% of General State Administration procedures are available to members of the public and companies online. The Government is promoting e-Government for a more effective and efficient Spanish administration that generates significant cost savings.
